

# C-CLAD

As an alternative to natural wood cladding, C-Clad offers a solution that is environmentally friendly, sustainable, and easy to install. Incorporating a unique blend of colours and a vibrant grain texture, the subtle variations create the most realistic engineered effect.

C-Clad composite cladding is not just aesthetically pleasing; it is made entirely from recycled materials.

Our range of composite cladding is incredibly resilient with a durable outer shell encapsulating the board, it forms a unique layer that protects each board from scratching and fading.

It can also help protect the exterior walls from the elements and provide a long-lasting layer of protection, along with improved thermal conductivity and acoustic performance.
